

We have added the ability to configure outbound smtp settings from the settings menu in v1.21.11.

Usually this was only configurable on the server itself.

Go to Setup -> System Settings -> Mail SMTP Settings

## Mail Sending

SMTP Mail Delivery

SMTP Protocol	<input type="text" value="smtp"/>
<small>sendmail uses the local DataTill server's own sendmail service to deliver mail smtp uses the settings defined below to deliver mail via an external mail server</small>	
SMTP Hostname	<input type="text" value=""/>
<small>For Gmail use ssl://smtp.googlemail.com as hostname</small>
