Hi HeroTill users!

Just a quick update to give you some information on the South African VoIP providers and systems that we have tested HeroTill with. Before we continue however, we would like to assure you that HeroTill works with any SIP or IAX trunk provider. In order to account your telephony data, you will need:

1. A SIP or IAX trunk
2. The rate card from your provider. This is in order to work out cost prices. If you cannot obtain an exact rate card, you can still use the system but please ensure that your selling price is more than your cost price.

HeroTill has tested the following South African VoIP providers with our system:

- Vox
- Neotel
- Connection Telecom
- X-Connect

If you are a provider and you would like us to test your service with our system, please let us know.
