

Data Rollovers can be managed for Individual Packages using the **Edit Data Products** feature. If you would rather manage rollover settings on a Customer level, please refer to this blog instead: [ICASA: Setting up Data Rollover using Customer Categories](#).

NOTE: If both the Data Product and Customer Category Roll over settings are enabled, the **data product rollover settings will take precedence**. (Wisps are encouraged to only use the rollover settings on individual products)

Any data (monthly and /or top-ups) which is rolled over from this setting will appear as an **auto rolled over top-up on the customer profile**:

Step 1: Navigate to Data Products

- Navigate to the Data menu -> Data products

Step 2: Edit Data Products and Enable Rollover Settings

- Edit a product
- Navigate to the Data Rollover Tab

- On the Data Rollover Tab enable the rollover settings and configure them. The following options are available:
 - **Auto-Rollover Unused Monthly Data** -> When enabled all unused **monthly data** will be added to the next month's data balance.
 - **Monthly Data Rollover Expiry** -> Monthly data will only be rolled over for the

number of months specified above before expiring.

- **Auto-Rollover Unused Topups** -> When enabled all unused **top-up data** will be added to the next month's data balance.
- **Topup Data Rollover Expiry** -> Top-up data will only be rolled over for the number of months specified above before expiring.

NOTE: These settings will also apply to customers who currently have that product assigned to their accounts.
