

We have improved the radius password visibility within HeroTill.

Users will now only be able to see or modify radius account passwords if they have the new “Device Passwords” read or write permissions.

We have also added a new permission “MikroTik Login Accounts” that allows you to create radius login accounts for use with Winbox logins. Only these special MikroTik login accounts will be able to select the “Mikrotik-Group” custom radius attribute, and only users with this permission will be able to see these special MikroTik login accounts.
