

There are **two Methods** for calculating Roll-Over for Top-ups in HeroTill.
Please see the explanation and calculation for both to assist you in choosing the correct one for your company

These settings can be found under the menu **Data -> Radius Settings -> Radius Setup**

Method 1 Calculate all months together

Data Rollover Calculation Method Calculate all months together Calculate each month individually

Define how unused data and topup rollover data are calculated (when enabled).

If this Method is selected it will calculate all months as one **Value**.

The following Calculation is done for a **10 Month Top-up Roll-Over for November**.

Month	Total Cap Limit	Total Usage	Total Top-up
January	100	0	100
February	100	100	0
March	100	100	0
April	100	100	0
May	100	100	0
June	100	100	0
July	100	100	0
August	100	100	0
September	100	200	0
October	100	200	0
	1000	1100	0
November Roll-Over			
Total Usage 1100 - Total Cap Limit 1000 + Total Top-up 100			
Zero Roll- Over			

All **10 Months** get calculated together, the client used a total of 1100GB out of his 1000GB Usage for 10 Months, the 100GB the client bought at the start **(That is not used,**

Regardless) gets added to the total Limit meaning the following:

$$1100 - 1000 + 100 = 0$$

Method 2 Calculate each month individually

Data Rollover Calculation Method

Calculate all months together

Calculate each month individually

Define how unused data and topup rollover data are calculated (when enabled).

If this Method is selected it will calculate all months **Apart**.

The following Calculation is done for a **10 Month Top-up Roll-Over for November**.

Month	Total Cap Limit	Total Usage	Total Top-up	Top-Up Left over
January	100	0	100	100
February	100	100	0	0
March	100	100	0	0
April	100	100	0	0
May	100	100	0	0
June	100	100	0	0
July	100	100	0	0
August	100	100	0	0
September	100	200	100	0
October	100	200	100	0
	1000	1100	300	100
November Roll-Over				
100GB Unused in January gets Rolled-Over to November				

All **10 Months** get calculated apart, the client used a total of 1100GB out of his 1000GB Usage for 10 Months, the 100GB the client bought at the start (**Was not used during that month**) and gets added as the top-up

100GB Top-up not used in January meaning November gets 100GB Top-up Roll-Over, during the months any data being used of the 100GB will become less and less each Roll-over.

So, due to 100GB Data in January, this will carry over to November.

Note the following additional information:

- **Data Roll-Over is not Accumulative, meaning Data will not double.**
- **In the above scenario, the remaining data in January will fall away when Roll-Over is calculated for December as it falls outside 10 Months.**
