

HeroTill is no longer doing new Asterisk API integrations, but you can import your VOIP usage so that you can bill your customers.

Manual VOIP usage importing tools can be found at Customers -> Import VOIP Usage

Then choose the type of import that you want to match with your import file.

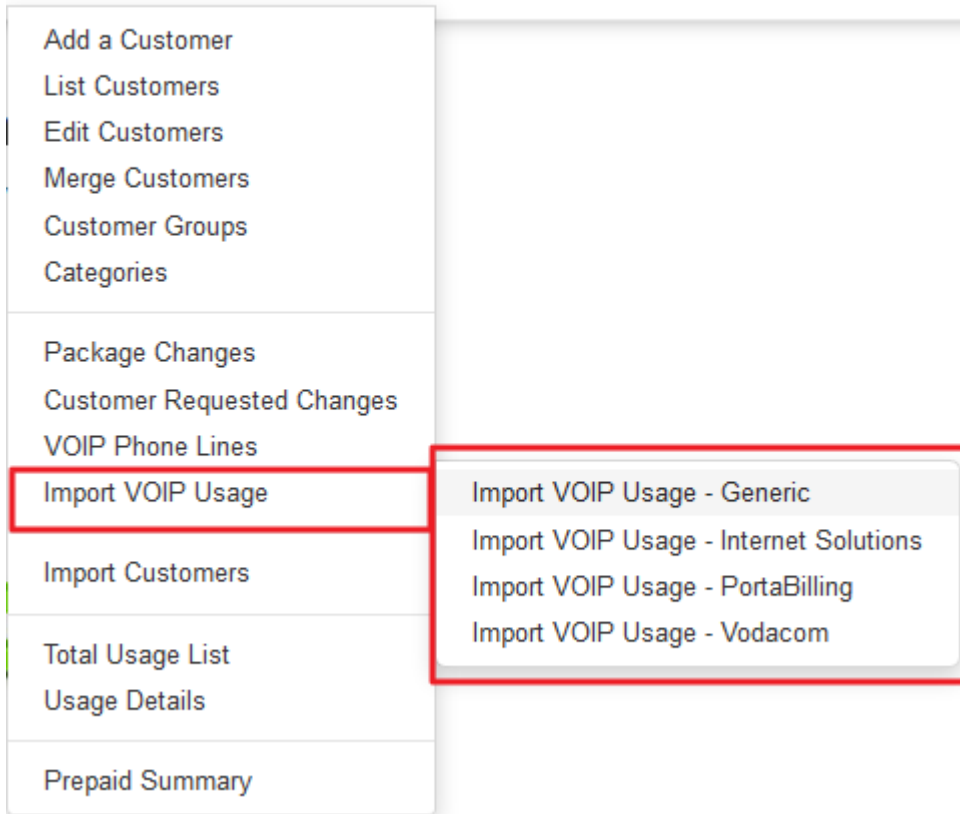

The current VOIP usage import types that are available are:

- Generic
- Internet Solutions
- PortaBilling
- Vodacom

There are more import types to come.

Each of these types has sample files you can download at step 1 of the import that you can compare your import file with.

Customers ▾ Asterisk ▾ Radius ▾ RAIN LTE ▾ Hotspots ▾ Workflow ▾ Dev

Step 1 of the import, it shows which fields are compulsory and it also has a sample file to download if it is needed:

Step 1

Introduction

This Wizard allows you to import or update VOIP usage information from a Vodacom csv file.

The csv file should contain the following information in this specific order:

- From Number *
- To Number *
- Country
- Call Description
- Call Date & Time *
- Call Duration *
- Call Cost Price *

* Required Field

[Download Sample File](#)

Please note:

- If a specific call entry already exists (matched by From & To Number plus call date) then the entry will be updated
- The default markup assigned to the customer's voip line will be used to calculate the selling price

Import your .csv file and then validate the file. It will show errors in your fields if there are any.

Step 2

VOIP usage Import - Vodacom

The csv file should contain the following information in this specific order:

- From Number * Must exist in Customer Voip Billing label
- To Number *
- Country
- Call Description
- Call Date & Time * must be in the format YYYY-MM-DD HH:MM:SS
- Call Duration * Must be in time format HH:MM:SS
- Call Cost Price *

* Required Fields

2121000000	2667616000	706200000478786029_0	000200262038815	2017-04-05 14:37:46	00:00:33	R 0.97

Remember that the “From Number” in your import file should match exactly on a phone number that is set up in your VOIP phone lines.

If you do not import a “Call Selling Price”, then the “Call Cost Price” field will be used to calculate a selling price for your billing purposes. It will use the markup percentage that is set on the phone line.

To set up your phone lines, go to Customers -> VOIP Phone Lines -> Edit/ Add Phone Line

Edit Phone Line 23 [x]

Phone Number 27- [input]

Description Office [input]

Customer [dropdown] x

Product [dropdown]

Extensions Extensions [input]

Expiry Date 2016-09-21 [input] **Clear** [button]

Bill Phone Line ON

Use default Pricing ON

Bill Phone Calls ON

Default Markup 16.00 % The markup is used to calculate retail call cost only when no retail price is provided for the call

Close [button] **Save changes** [button]
